

COMPREHENSIVE MASTER PROJECT DOCUMENT

Business, Product, Technical Architecture, Automation, Security,
Operations & Claude Code Build Specification

DOCUMENT STATUS

Version 5.0 | Current authoritative consolidated project specification | Prepared for direct use with Claude Code | 7
September 2026

This document supersedes earlier TrustMart project descriptions wherever they conflict with the decisions recorded here.

Document Control and Authority

Field	Current Value
Company	TrustMart Limited
Brand	TrustMart
Official short tagline	Find. Secure. Transact.
Product descriptor	Marketplace Escrow
Corporate promise	Securing Transactions. Building Trust.
Website	www.trustmartltd.com
Social handle	@trustmartltd
Email	trustmartltd@gmail.com
Phone	08132701735
Version	5.0
Date	7 September 2026
Primary build environment	Claude Code directly (terminal/CLI), private source repository
Authority	Single consolidated master project specification

SOURCE-OF-TRUTH RULE

Claude Code must treat this document as the current consolidated product and implementation authority. Where an older document, prototype, UI, prompt, code comment or assumption conflicts with this document, this document controls unless the founder explicitly approves a later written change.

How Claude Code must use this document

1. Read the complete document before making architectural or business-rule changes.
2. Summarize the product model, non-negotiable rules, current open decisions and planned scope before implementation.
3. Do not invent providers, legal conclusions, financial mechanics or policy values that are explicitly marked configurable or pending approval.
4. Implement one bounded phase at a time, with migrations, tests, security review and a Git checkpoint.
5. Update project status, decision log, risk register and traceability when material implementation decisions are made.

28	Final Acceptance Criteria

1. Executive Project Definition

TrustMart is a technology-driven Trust & Commerce Network designed to connect serious buyers with relevant sellers and to provide optional transaction-assurance infrastructure that helps parties complete eligible deals with greater confidence.

The platform is deliberately built as one integrated ecosystem with two sibling products: TrustMart Marketplace and TrustMart Escrow / Transaction Assurance. They share identity, verification, risk, payments, rewards, reviews, notifications, analytics and audit infrastructure, but each product remains independently usable.

CORE ARCHITECTURAL PRINCIPLE

Marketplace may feed Escrow, but Escrow must never depend on Marketplace. A user who found a deal on WhatsApp, social media, another marketplace, through a referral, offline or through a direct business relationship must still be able to create a TrustMart Escrow transaction.

Primary business outcomes

- Help buyers describe what they want and discover relevant supply faster.
- Help sellers turn inventory into qualified buyer opportunities instead of waiting passively for listing discovery.
- Monetize Marketplace opportunity access through seller/business subscriptions and entitlements.
- Offer TrustMart Escrow as an optional value layer when parties want structured transaction assurance.
- Build reusable trust, transaction, demand and supply data while respecting privacy and consent.
- Create a platform that can expand from initial high-value sectors into broader legitimate commerce.

Core user journey

Marketplace: DISCOVER -> MATCH -> INTEREST -> SUBSCRIBE -> CONNECT -> NEGOTIATE -> CHOICE: DIRECT DEAL or TRUSTMART ESCROW.

Escrow: CREATE -> AGREE TERMS -> VERIFY/FUND -> FULFIL -> ACCEPT/RELEASE -> COMPLETE -> REWARD -> REVIEW.

2. Brand Identity and Positioning

Approved identity

Element	Approved Standard
Company	TrustMart Limited
Brand	TrustMart
Descriptor	Marketplace Escrow
Official short tagline	Find. Secure. Transact.
Corporate promise	Securing Transactions. Building Trust.
Primary palette	Deep Navy #0B2C5F; Gold #D4A017; White #FFFFFF; Dark Accent #1A1A1A
Typography	Montserrat Bold / Montserrat as brand standard; compatible clean sans-serif fallback in product UI
Logo concept	Shield + TM monogram + handshake/trust motif; navy/gold primary treatment

The earlier escrow-specific line “We Hold. You Trust. We Deliver.” is retired from the current master identity because TrustMart now covers both Marketplace and Escrow.

Tagline hierarchy

- Primary short brand tagline: Find. Secure. Transact.
- Product descriptor: Marketplace | Escrow.
- Corporate promise: Securing Transactions. Building Trust.
- Long-form campaign language may use “Find the Deal. Secure the Transaction.” where more explanation is helpful.

Logo variations required

- Primary full-colour logo: navy/gold shield/monogram/handshake with TrustMart Limited, Marketplace | Escrow and Find. Secure. Transact.
- App/social icon: shield/monogram mark only, optimized for square/circular crops and small sizes.
- Monochrome logo: single-colour black, white or approved navy treatment for documents, embossing and constrained reproduction.
- Horizontal and reversed/dark-background variants should preserve the same mark proportions and approved wording.

BRAND LOCK

Claude Code and design systems must not alter the logo concept, brand colours, tagline or descriptor based on old mockups or third-party materials. Any change requires an explicit founder-approved brand decision.

3. Product Architecture

Layer	Responsibility
Shared Core	Identity, profiles, businesses, staff, RBAC, consent, verification, configuration, notifications, audit, files/media.
Marketplace	Categories, dynamic attributes, listings, buyer requests, search, matching, interests, leads, subscriptions, lifecycle, re-engagement, Marketplace analytics.
Escrow	Standalone transaction creation, parties, versioned terms, acceptance, conditions, fee allocation, funding, fulfilment, release/refund/dispute and completion.
Finance	Payment verification, virtual/payment accounts, ledger, reconciliation, reward wallet, withdrawals.
Trust	KYC/KYB, TrustGuard, moderation, risk cases, disputes, reviews, reputation/history.
Automation	n8n orchestration, communications, reminders, routing, CRM, review requests, analytics sync; never financial source of truth.
AI	Interpretation, drafting, explanation, summarization, recommendations and triage within strict boundaries.

One engine, not duplicate systems

There must be one Escrow Engine. Do not create separate MarketplaceEscrow and StandaloneEscrow implementations. Use a common EscrowTransaction model with an origin source such as MARKETPLACE, DIRECT, PARTNER or BUSINESS_API. Marketplace references are optional and nullable.

4. TrustMart Marketplace

Marketplace proposition

- Buyers: Tell TrustMart what you want. TrustMart finds matching sellers.
- Sellers: Stop waiting for buyers to find your listing. Let TrustMart find matching buyers.
- Businesses: Turn inventory into qualified buyer opportunities.

Initial category rollout

6. Real Estate
7. Vehicles
8. Travel and selected high-value services
9. Import/export and trade
10. Broader legitimate categories after liquidity and controls are proven

Category architecture

Use Category -> Subcategory -> Dynamic Attributes. Category-specific requirements must be configuration-driven rather than hard-coded as separate applications.

Attribute metadata	Examples
Identity	key, label, category/subcategory
Type	text, number, money, boolean, option, multi-option, date, range
Behaviour	required, searchable, filterable, matchable, public/private
Validation	allowed options, min/max, unit, format
Presentation	display order, help text, visibility rules

Seller listing

- Seller/business owner
- Category/subcategory
- Title and description
- Asking price and currency
- Negotiable flag
- Condition
- General location
- Quantity/availability
- Dynamic attributes
- Photos/media
- Optional verification documents
- Lifecycle status and dates

Buyer request

- Buyer
- Category/subcategory
- Budget range
- Preferred locations
- Quantity
- Timeline
- Hard requirements
- Preferred/flexible requirements
- Budget/location flexibility
- Notification preferences
- Status

Natural-language AI may convert a buyer's prose into a structured draft, but the buyer must confirm the interpreted request before it becomes active.

5. Matching Engine

MATCHING AUTHORITY

The authoritative match score is deterministic backend application logic. AI and n8n may explain, summarize or trigger workflows around a score, but they must not be the source of truth for the score.

Matching pipeline

11. Select compatible active buyer request and active listing.
12. Apply category/subcategory compatibility.
13. Evaluate hard requirements. Any failed hard requirement may disqualify the candidate regardless of weighted score.
14. Evaluate configured weighted criteria.
15. Calculate normalized score.
16. Apply configured qualifying threshold.
17. Persist score, profile/version, criterion-level results and hard-failure reasons.
18. Classify match and emit a domain event.
19. Notify the buyer according to preferences.

Initial configurable defaults

Setting	Initial Default	Rule
Qualifying threshold	70%	Configurable by authorized admin/policy.
Excellent	90-100	Configurable classification band.
Strong	80-89	Configurable classification band.
Good	70-79	Configurable classification band.
Alternative	Below 70	Clearly labelled; never misrepresented as qualifying.

Example real-estate weighting

Criterion	Example Weight
Location	25%
Budget	25%
Property type	15%
Bedrooms	10%
Land size	10%
Title	10%
Preferences	5%

These weights are examples and must be configurable/versioned rather than hard-coded.

Recalculation triggers

- New/updated listing
- New/updated buyer request
- Price reduction
- Buyer flexibility change
- Listing renewal/reactivation
- Matching profile/weight change

6. Marketplace Monetization and Contact Access

Monetization

Marketplace Escrow is optional. Marketplace revenue is generated primarily through seller/business subscriptions and opportunity access. Escrow generates a separate transaction fee only when parties voluntarily choose TrustMart Escrow.

Initial seller pricing

Plan	Initial Price	Notes
Weekly Seller	₦5,000	Configurable introductory default.
Monthly Seller	₦15,000	Configurable introductory default.
Future tiers	Free / Professional / Business / Enterprise	Entitlements and pricing controlled by Admin; do not hard-code.

Entitlements may control

- Active listing limits
- Lead/contact access
- Business staff seats
- Analytics
- Bulk upload
- CRM
- API access
- Featured/priority options

- Verification features

Contact privacy rule

NON-NEGOTIABLE

Seller subscription alone must never expose buyer contact information. Contact access requires valid subscription/entitlement + buyer consent/contact preference + valid interest/lead/match context + server-side authorization + audit logging.

Customer APIs must expose only the contact data the buyer has permitted for the relevant context and channel.

7. Listing, Lead and Re-engagement Lifecycles

Listing lifecycle

Initial default listing duration is 14 days, configurable.

DRAFT -> SUBMITTED -> AUTOMATED CHECKS -> REVIEW IF REQUIRED -> ACTIVE -> EXPIRING -> EXPIRED.
Additional controlled states include SOLD, REJECTED, SUSPENDED and ARCHIVED.

Pre-expiry

Before expiry, ask the seller: SOLD or STILL AVAILABLE. SOLD stops matching and records the outcome. STILL AVAILABLE can renew the listing.

Price reduction

Store price history. A meaningful price reduction triggers re-matching and may notify prior interested buyers and newly qualifying buyers according to notification rules.

Lead lifecycle

NEW -> VIEWED -> CONTACTED -> INSPECTION SCHEDULED -> NEGOTIATING -> TRANSACTION STARTED -> WON / LOST. SPAM/FRAUD is a controlled moderation/risk outcome, not a casual user-set state.

Escrow cross-sell moments

- Contact reveal
- I'm Interested
- Lead becomes Negotiating
- Offer/deal agreed
- Follow-up confirms parties are progressing

CROSS-SELL MESSAGE

You found the deal. Now secure it. TrustMart Escrow is optional, but it provides a structured way for both parties to agree transaction conditions and manage payment with greater confidence.

8. TrustMart Escrow / Transaction Assurance

Standalone capability

Escrow must be usable without Marketplace. Eligible deals may originate from TrustMart Marketplace, WhatsApp, social media, another marketplace, a physical/offline deal, a direct relationship, a referral or a future partner/API.

Workflow

CREATE ESCROW -> CATEGORY/ITEM/SERVICE -> AMOUNT -> PARTIES -> DELIVERY/PERFORMANCE TERMS -> INSPECTION/ACCEPTANCE CONDITIONS -> RELEASE/COMPLETION CONDITIONS -> CANCELLATION/DISPUTE TERMS -> FEE ALLOCATION -> REVIEW -> INVITE COUNTERPARTY -> ACCEPT/REQUEST CHANGES -> MUTUAL ACCEPTANCE -> KYC/RISK -> FUNDING INSTRUCTIONS -> VERIFIED FUNDING -> ACTIVE -> FULFILMENT -> CONFIRMATION/RELEASE -> COMPLETION -> REWARD -> REVIEW.

Versioned terms

Material terms must be versioned. No party may secretly change accepted terms. A material change creates a new version requiring the required parties to accept again.

Marketplace handoff

A Marketplace CTA such as “Secure This Deal With TrustMart Escrow” may prefill permitted buyer, seller, listing and agreed-offer details. The handoff creates an Escrow DRAFT only. Prefilled Marketplace data must never silently become binding terms.

Escrow fee

Rule	Current Decision
Platform fee	2.5% of transaction value, configurable/versioned.
Buyer pays	Supported.
Seller pays	Supported.
Shared	Supported according to mutually agreed allocation, not limited to 50/50.
Accounting	Transaction principal/deal value and TrustMart fee modeled separately.
Funds flow	Final live collection/deduction mechanics depend on approved legal/payment-provider structure.

9. Payment, Ledger and Financial Controls

FINANCIAL TRUTH

The backend Financial Ledger is the financial system of record. Frontend state, screenshots, SMS, email, customer claims, AI, n8n or an unverified webhook are never authoritative proof of payment.

Payment verification pipeline

20. Receive provider/bank event.

21. Validate signature/authenticity.
22. Independently verify with provider/bank.
23. Confirm amount, reference, destination account and status.
24. Check idempotency/duplicate processing.
25. Create/update authoritative PaymentRecord.
26. Post ledger entries atomically.
27. Transition Escrow only when all guards are satisfied.
28. Write audit/reconciliation data.
29. Notify relevant parties.

Ledger invariants

- No JavaScript floating-point arithmetic for authoritative money calculations.
- Use exact-safe money representation, preferably integer minor units plus currency.
- No generic Edit Balance function.
- Posted entries are immutable/auditable.
- Corrections use reversal/compensating entries.
- All financial commands are idempotent.
- Material financial actions use maker-checker where appropriate.
- Reconciliation exceptions are explicit operational records.

Legal/compliance gate

TrustMart must not assume that company registration alone authorizes a particular customer-funds structure. Before production money movement, qualified Nigerian legal/compliance advice and approved banking/payment-provider structure are required.

10. Referral, Rewards and Reward Wallet

Current internal reward model

Allocation	Internal Rate	Visibility
Buyer appreciation	0.1%	Confidential internal policy.
Seller appreciation	0.1%	Confidential internal policy.
Referral reward	0.3%	Strictly confidential internal policy.
Remaining gross TrustMart share from 2.5%	2.0% before provider/operating/tax costs	Internal finance view only.

STRICT CONFIDENTIALITY

Exact referral and appreciation percentages must never be exposed to customers, referrers, public APIs, frontend bundles, public website copy, support scripts, marketing, customer notifications or AI responses. Customer-facing experiences show reward amount/status/type, not the rate or formula.

Authorization

Use least privilege. Exact policy rates should be visible only to authorized internal roles such as Super Admin, Finance Admin, approved Finance Staff and approved Management as determined by RBAC.

Company Referral

If a registration has no valid qualifying external referral, referral ownership defaults to TrustMart / Company Referral. Do not leave referral ownership null.

Reward eligibility

- Eligible successfully completed Escrow
- Final reconciliation passed
- No active dispute/reversal/chargeback
- Risk/fraud checks passed
- No self-referral/circular/fake-transaction abuse
- Applicable policy version identified

Reward event flow

EscrowCompleted -> reconciliation -> dispute/reversal/risk check -> reward eligibility -> configurable short delay -> ledger postings -> Reward Wallet credits -> notifications.

Reward Wallet

- Separate from transaction funds
- Minimum cash withdrawal: ₦1,000
- Future small-balance utility may include airtime/data and Marketplace spending
- Withdrawals require appropriate identity/risk/payment controls

11. Customer Experience and Review Engine

After an eligible successfully completed Escrow, TrustMart should request independent feedback from the buyer and seller about TrustMart's service.

Channels

- In-app notification
- Email
- WhatsApp through approved/consented messaging infrastructure

Review form

- Overall 1-5 star rating
- Written review
- Optional ease-of-use rating
- Optional trust/confidence rating
- Optional service satisfaction rating
- Optional Would you recommend TrustMart? Yes/Maybe/No

Review workflow

EscrowSuccessfullyCompleted -> final reconciliation -> eligible reward processing -> configurable short delay -> ReviewRequested. Timing may be configured, but review requests only follow a true completed transaction.

Reminder policy

Use an initial request plus a limited number of configurable reminders. Stop after submission or the final configured reminder. Avoid repeated harassment.

Service recovery

Rating/Signal	Action
4-5 stars	Thank the user; capture positive feedback.
3 stars	Record improvement feedback; optional follow-up.
1-2 stars	Create Customer Experience/Support follow-up and assign staff.
Funds/fraud/dispute/legal complaint	Escalate to appropriate human operational queue regardless of star rating.

Public testimonials

TrustMart service feedback must not automatically become public. Public testimonial use requires separate consent/moderation.

Separation from reputation

TrustMart Service Review is feedback about TrustMart. Future buyer/seller reputation reviews are counterparty reputation. Do not conflate the two.

12. Identity, KYC/KYB, TrustGuard and Disputes

Identity and organizations

- User/Profile
- Business
- Business Staff
- External Identity
- Role/Permission
- UserRole
- Verification Case
- Consent/Notification Preferences

Verification

Verification requirements should be risk- and transaction-appropriate, provider-neutral in the core architecture, and configurable as legal/provider requirements are finalized.

TrustGuard

- Duplicate accounts/listings
- Suspicious prices
- Stolen-image checks where feasible
- Device/IP/velocity signals
- Fake interest
- Self-referral/circular transactions
- Payment anomalies

- Manual review queues
- Reporting/restrictions

AI boundary

AI may summarize risk signals or help prioritize cases. It must not independently determine legal title, permanently decide fraud guilt, release funds, resolve serious disputes or make unsupported final high-risk KYC decisions.

Disputes

Disputes must place appropriate holds and route to controlled human processes. Release/refund actions must respect accepted transaction terms, evidence, state guards, authorization, audit and maker-checker controls.

13. Notifications, Support and Communication

Channels

- In-app
- Email
- Approved/consented WhatsApp
- Future SMS/push where justified

Important event families

- Matches
- Interests/leads
- Contact access
- Subscription payment/activation/expiry
- Listing expiry/renewal/price change
- Escrow invitations/actions
- Payment/funding verification
- Dispute/risk
- Completion
- Rewards
- Review requests
- Support/service recovery

Communication safety

Notifications must never reveal confidential reward rates, sensitive KYC data, hidden buyer information, internal fraud logic or secrets. High-risk financial/legal support issues must escalate to humans.

14. Admin Control Centre and RBAC

Admin areas

- Users/businesses
- Categories/attributes
- Listings/moderation
- Buyer requests/matches
- Interests/leads

- Subscriptions/pricing/entitlements
- KYC/KYB
- Escrows
- Payments/reconciliation
- Ledger views
- Disputes/risk
- Rewards/referrals
- Reviews/CX
- Notifications/support
- Analytics
- Audit/configuration

Admin safety

NO BYPASS UI

Do not create unrestricted buttons such as Edit Balance, Force Payment, Force Release or Force Complete. Admin actions must call the same guarded domain services, authorization and audit controls as other trusted system paths.

Role examples

Role	Typical Scope
Super Admin	Platform configuration and high-level governance; sensitive actions still guarded.
Finance Admin/Staff	Authorized finance/reconciliation/reward policy operations according to least privilege.
Operations	Escrow/marketplace operational queues without unrestricted ledger authority.
Support/CX	Support cases, review follow-up; no confidential reward rates or fund movement.
Moderator/Risk	Listings/reports/risk queues within approved scope.
Business Owner/Staff	Own business listings/leads/analytics according to entitlement.
Customer	Own profile, requests, interests, Escrows, rewards, reviews.

15. AI and n8n Automation Architecture

n8n may

- Send notifications
- Run reminders/re-engagement
- Route support/KYC/risk cases
- Sync CRM/analytics
- Trigger review requests
- Orchestrate marketing workflows
- Call authenticated TrustMart APIs

n8n must not

- Write financial tables directly

- Be the ledger
- Mark payment successful authoritatively
- Set arbitrary Escrow financial state
- Calculate authoritative confidential reward percentages
- Release/refund/withdraw funds

AI may

- Convert buyer prose into structured draft
- Draft/improve listings
- Detect missing information
- Explain deterministic matches
- Suggest alternatives
- Summarize demand and unsold inventory
- Triage/draft support
- Summarize reviews and themes
- Assist risk analysis

AI must not

- Guarantee property ownership or seller legitimacy
- Validate legal title
- Move/release/refund/withdraw funds
- Alter ledger balances
- Approve unsupported high-risk KYC
- Resolve serious disputes
- Reveal confidential internal reward/referral policy

Automation systems

System	Purpose
Marketplace automation	Matching notifications, interests, expiry, re-engagement, subscriptions.
Escrow workflow	Action reminders and operational routing around backend-authoritative state.
Payment/Reconciliation	Exception routing after backend verification.
TrustAssist	Customer support triage/drafting with human escalation.
TrustSales/TrustGrowth	B2B acquisition, CRM and marketing automation.
TrustGuard	Risk signal orchestration and review routing.
Customer Experience	Review requests, reminders, low-rating service recovery.
Liquidity Intelligence	Demand/supply imbalance detection and acquisition recommendations.

16. Technical Architecture and Repository Design

Preferred MVP stack

Layer	Technology / Direction
Language	TypeScript

Monorepo	pnpm workspaces + Turborepo
Web/PWA	Next.js App Router
Backend	NestJS modular monolith
API	REST/JSON + OpenAPI
Database	PostgreSQL
ORM	Prisma
Identity	OIDC-compatible provider abstraction; provider selection deferred
Automation	n8n around stable authenticated APIs/events
Containers	Docker/Compose; managed cloud deployment
Native apps	Android after traction; iOS later

Architecture principles

- Disciplined modular monolith first; avoid premature microservices/Kubernetes.
- One backend financial truth reused by Web/PWA, Admin and future mobile.
- Transactional outbox for durable domain-event delivery where needed.
- UTC authoritative timestamps.
- Opaque UUID-style identifiers.
- Server-side feature flags/configuration.
- Provider adapters owned by TrustMart.
- Append-oriented audit trail.
- Version financial/business rules.

Recommended repository

trustmart/ with root CLAUDE.md, project status/decision/risk files, apps/web, apps/admin, services/api, packages/contracts/config/database/ui/testing, database/prisma, automation/n8n, automation/agents, docs, infrastructure, tests and scripts.

17. Data Architecture and Core Entities

Domain	Core Entities
Identity	User, Profile, Business, BusinessStaff, ExternalIdentity, Role, Permission, UserRole, VerificationCase
Marketplace Config	Category, Subcategory, AttributeDefinition, AttributeOption, CategoryAttribute, MatchingProfile, MatchingCriterion, PlatformConfiguration
Seller Inventory	Listing, ListingAttributeValue, ListingMedia, ListingDocument, ListingPriceHistory, ListingLifecycleEvent, ListingModerationCase
Buyer Demand	BuyerRequest, BuyerRequirement, BuyerRequestLocation, BuyerRequestLifecycleEvent
Matching	MatchRun, Match, MatchCriterionResult, MatchNotification
Engagement	SavedListing, Interest, ContactConsent, ContactAccessGrant, Lead, LeadActivity

Subscription	SubscriptionPlan, SubscriptionEntitlement, Subscription, SubscriptionPayment, SubscriptionEvent
Escrow	EscrowTransaction, EscrowParty, EscrowTermVersion, EscrowAcceptance, EscrowCondition, EscrowFeeAllocation, EscrowEvent
Finance	PaymentAccountAssignment, PaymentRecord, WebhookEvent, LedgerAccount, LedgerJournal, LedgerEntry, LedgerExternalReference, ReconciliationException
Referral/Reward	ReferralRelationship, RewardPolicyVersion, RewardRecord, RewardWallet, RewardWithdrawal
CX	ReviewRequest, ReviewReminder, ServiceReview, ServiceRecoveryCase; future ReputationReview
Communication	NotificationRecord, NotificationPreference, Consent, WhatsAppConsent, SupportCase, SupportMessage
Risk/Audit	RiskCase, RiskSignal, FraudSignal, Report, AuditEvent

Data rules

- Integer minor units for money
- Currency codes
- Explicit policy/version references
- Idempotency keys for financial effects
- No reward rates in customer DTOs
- Avoid opaque JSON for query/matching-critical data
- Sensitive documents private by default

18. API, Events and State Machines

API conventions

- /api/v1/...
- REST/JSON
- OpenAPI
- Server-side authorization
- Consistent error schema
- Correlation IDs
- Idempotency keys for financial mutations

Representative Marketplace endpoints

- GET /marketplace/categories
- POST/GET/PATCH /marketplace/listings
- POST /marketplace/listings/:id/submit | mark-sold | renew | price
- POST/GET/PATCH /marketplace/buyer-requests
- POST /marketplace/buyer-requests/:id/activate | pause
- GET /marketplace/matches
- POST /marketplace/listings/:id/interests
- POST /marketplace/interests/:id/contact-access
- GET/PATCH marketplace leads

- GET /subscriptions/plans
- POST /subscriptions

Representative Escrow endpoints

- POST /escrows
- POST /escrows/:id/invite
- POST /escrows/:id/terms
- POST /escrows/:id/accept
- POST /escrows/:id/fund-instructions
- POST /marketplace/interests/:id/create-escrow-draft

Important domain events

- MarketplaceListingCreated/Activated/PriceReduced/Expiring/Expired
- MarketplaceBuyerRequestActivated
- MarketplaceMatchCreated
- MarketplaceInterestCreated
- MarketplaceContactAccessGranted
- MarketplaceLeadStatusChanged
- SubscriptionActivated/Expiring/Expired
- EscrowDraftCreatedFromMarketplace
- EscrowTermsAccepted
- PaymentVerified
- EscrowFunded
- EscrowCompleted
- RewardEligibilityReady
- RewardAvailable
- ReviewRequestScheduled
- ServiceReviewSubmitted

State authority

State transitions occur through domain services with guards. Frontend, Admin, n8n and AI cannot assign arbitrary financial or Escrow states.

19. Security, Privacy and Audit

Security controls

- TLS in transit
- Encryption for sensitive data at rest where appropriate
- Secure password hashing if passwords are used
- MFA for privileged accounts
- RBAC and resource-level authorization
- Secure sessions
- Rate limiting
- Secret management
- Backups
- Monitoring
- Webhook verification

- Idempotency
- Least privilege
- Upload validation
- Audit logging

Privacy by design

Treat buyer budgets/purchase intent, seller inventory/contact details, KYC, payment and transaction data as sensitive. Collect and reveal only what is necessary for the authorized purpose.

High-risk negative tests

- IDOR
- Contact scraping
- Subscription bypass
- Privilege escalation
- Forged/replayed webhook
- Duplicate funding
- Double release/refund race
- Ledger imbalance
- Reward duplication/rate leakage
- Self-referral/circular transactions
- AI prompt injection
- n8n privilege abuse
- Review manipulation

IP protection

Keep source code, matching logic, fraud logic, scoring, automation and confidential commercial rules in TrustMart-controlled private repositories and access-controlled systems.

20. Analytics, KPIs and Liquidity Intelligence

Marketplace funnel

Visitor -> Registered -> Buyer Request/Seller Listing -> Match -> Interest -> Contact/Conversation -> Inspection/Negotiation -> Transaction Started -> Transaction Completed -> Reward -> Service Review -> Repeat.

KPIs

- Active buyers/sellers/listings/requests
- Match rate and score distribution
- Time to first match
- Match-to-interest conversion
- Interest-to-contact conversion
- Contact-to-transaction conversion
- Completion rate
- Sell-through
- Subscription conversion/renewal
- Retention
- GMV
- Escrow adoption

- Fraud/risk rates
- Review response rate
- Satisfaction/recommendation metrics

North Star

Near-term Marketplace: Successful Buyer-Seller Matches Resulting in Verified Commercial Progress. Longer-term: Successfully Completed TrustMart Transactions.

Liquidity Intelligence Engine

Detect category/location demand-supply imbalance, such as many qualified buyer requests with too few active listings, and give management acquisition recommendations. Keep this internal and privacy-conscious.

21. Public Website, Web App and UI/UX

Public website

- Home
- Marketplace / Find a Deal
- Escrow / Secure a Deal
- How It Works
- Pricing/subscription information
- Referral
- Trust & Safety
- Help/FAQ
- Business onboarding
- Legal/policy pages

Primary navigation language

- Find a Deal / Marketplace
- Secure a Deal / Escrow

Web App/PWA dashboard

Area	Examples
Marketplace	Buyer Requests, Listings, Matches, Interests, Saved, Leads
Escrow	Create Escrow, Transactions, Invitations, Actions, Completed, Disputes
Trust	Verification, Service Reviews/History, future reputation
Finance	Reward Wallet, Rewards, Withdrawals, payment views
Account	Referral, Notifications, Settings

UI brand standard

Use a clean premium white-dominant product interface with TrustMart deep navy for structure/navigation and gold for branded emphasis, while status colours are used functionally and accessibly. The approved UI work should retain the exact TrustMart logo identity and the tagline Find. Secure. Transact.

Responsive priority

Web/PWA first, fully responsive for mobile browsers. Native Android follows demonstrated traction; iOS later.

22. Rollout, Growth and Commercial Strategy

Demand-first launch

Acquire structured buyer requests before aggressive seller onboarding. Concentrate liquidity by category and geography instead of launching every possible market simultaneously.

Initial focus

- Real Estate first
- Selected vehicle segment next
- Travel/high-value services where controls and demand justify
- Trade/import-export later
- Broader categories only after liquidity, moderation and operations are proven

Value over enforcement

Do not punish users for completing Marketplace-originated deals outside TrustMart. Win Escrow adoption through value: clarity, confidence, structured terms, payment assurance, transaction history and service quality.

Seller conversion

Subscription conversion pages should sell opportunity value - matching buyers, qualified leads, inventory exposure and business tools - rather than functioning as an arbitrary obstruction.

23. Implementation Roadmap for Claude Code

Phase	Scope	Exit Condition
0	Repository/SSOT, CLAUDE.md, status/decision/risk/traceability	Claude proves understanding; baseline clean.
1	Shared Core: auth, profiles, business/staff, RBAC, config, audit, consent, verification foundation	Core APIs/tests pass.
2	Marketplace: categories, attributes, listings, buyer requests, search	CRUD/lifecycle foundations pass.
3	Matching, criterion results, notifications, interests, contact consent/access, leads	Deterministic matching and privacy tests pass.
4	Subscriptions/entitlements, payments for subscription, listing lifecycle, re-engagement	Entitlement and expiry flows pass.
5	Standalone Escrow, parties, terms, acceptance, conditions, fee allocation	No production funds yet; state tests pass.
6	Payment adapters, verification, virtual accounts, ledger, reconciliation	Financial invariants and idempotency pass.
7	KYC/KYB, TrustGuard, disputes, release/refund/completion	High-risk state guards pass.

8	Referral/rewards/wallet/withdrawal + service reviews/service recovery	Confidentiality and eligibility tests pass.
9	Optional Marketplace-to-Escrow handoff	Draft handoff and explicit term confirmation pass.
10	Admin + analytics + liquidity intelligence	RBAC and audit pass.
11	n8n + AI around stable APIs	Boundary and prompt-injection tests pass.
12	QA/UAT/security/legal/provider readiness and soft launch	All launch gates passed.

MVP discipline

Delay complex AI, full CRM, advanced public reputation, enterprise APIs, predictive pricing, complex offer negotiation, multi-country expansion and native mobile apps until core Marketplace liquidity and Escrow operations are working.

24. Testing, QA, UAT and Launch Gates

Required test layers

- Unit
- Integration
- API/contract
- Database/migration
- End-to-end
- Authorization/privacy negative tests
- Financial invariant tests
- Concurrency/retry/idempotency tests
- Security/adversarial
- UAT
- Backup/restore and operational drills

No-go conditions

- Ledger imbalance
- Unverified payment can fund Escrow
- Double release/refund possible
- Customer can see confidential rates
- Contact access bypass
- Material RBAC/IDOR issue
- AI/n8n can move money
- Destructive migration without approved plan
- Unresolved critical legal/provider funds-flow dependency

Environments

Development, Staging and Production must have separate databases, secrets, provider credentials, n8n instances and operational controls.

25. Operations, Governance and Business Continuity

Operational functions

- Finance/reconciliation
- Marketplace moderation
- KYC/risk
- Escrow operations
- Disputes
- Customer support/CX
- Vendor/provider management
- Security/incident response
- Analytics/management reporting

Governance

Material business, financial, security and policy changes must be versioned, auditable and attributable to an authorized decision maker. Sensitive configuration changes should capture who changed it, old/new version, effective date, reason and approval.

Continuity

- Automated backups
- Restore testing
- Provider outage procedures
- Incident command
- Security incident playbooks
- Reconciliation recovery
- Communication templates
- Kill switches for risky automations

26. Open Decisions and External Dependencies

DO NOT INVENT

Claude Code must leave provider-specific integrations behind abstractions/mocks until the applicable provider and legal/compliance decisions are approved.

Area	Open Decision / Dependency
Customer funds	Final Nigerian legal/regulatory structure and approved funds flow.
Payment/banking	Production provider, virtual-account capabilities, settlement/reversal mechanics.
Identity	Production OIDC/identity provider.
KYC/KYB	Provider and final operational thresholds.
Messaging	Production email and WhatsApp Business providers.
Storage/maps	Object storage and geocoding/map providers.
Tax/accounting	Production chart of accounts and tax/revenue-recognition treatment.
Marketplace	Final free/trial entitlements, category weights and moderation

	thresholds.
Native apps	Traction thresholds for Android and iOS.

27. Claude Code Master Execution Instructions

Required first session

30. Read this entire Master Project Document and the root CLAUDE.md if present.
31. Inventory the repository, schema, migrations, tests, workflows and existing documents.
32. Identify conflicts with this document; do not silently choose an older rule.
33. Explain the TrustMart product model back in your own words.
34. List open decisions that block implementation.
35. Propose the next bounded implementation phase and wait for approval before material code changes.

Claude must explicitly understand

- TrustMart = Marketplace + standalone Escrow on one shared platform.
- Marketplace does not require Escrow.
- Escrow can secure direct/external deals.
- Seller subscription and buyer consent govern contact access.
- 70% match threshold is an initial configurable default.
- 14-day listing lifecycle is an initial configurable default.
- 2.5% Escrow fee is configurable and may be buyer/seller/shared.
- Exact reward/referral rates are confidential internal policy.
- No valid external referrer defaults to Company Referral.
- Ledger is financial truth.
- AI and n8n cannot move money.
- Eligible completed Escrow triggers reward eligibility and TrustMart service-review requests.
- Current official tagline is Find. Secure. Transact.

Working method

For every phase: READ -> PLAN -> APPROVE -> IMPLEMENT -> REVIEW MIGRATION -> TEST -> ADVERSARIAL REVIEW -> UPDATE TRACEABILITY/STATUS/RISK/DECISIONS -> COMMIT -> NEXT.

Stop conditions

- Legal customer-funds structure is unclear.
- A production provider is being invented.
- Fee/reward/referral rules conflict.
- A destructive migration is proposed.
- Confidential percentages would reach client code or unauthorized logs.
- Direct financial database bypass is requested.
- A production secret is required.
- Historical posted ledger data would be mutated.
- Marketplace is being made to require Escrow.

Recommended initial Claude prompt

PROMPT

Read the complete TrustMart Comprehensive Master Project Document v5.0 and the repository instructions. Do not code yet. Audit the repository and explain the current TrustMart architecture, business rules, financial invariants, Marketplace/Escrow relationship, brand identity, confidential reward policy, review engine, AI/n8n boundaries, open decisions and implementation status. Identify conflicts or missing pieces. Then propose only the next bounded implementation phase, including files, schema changes, APIs, authorization, tests, risks and explicit exclusions. Wait for my approval before material implementation.

28. Final Acceptance Criteria

- A buyer can create a structured request and receive deterministic qualifying matches.
- A seller can create/manage listings and receive qualified interests/leads.
- Hard requirements and weighted matching are reproducible and versioned/configurable.
- Contact access respects entitlement, consent, context, authorization and audit.
- Listings expire/renew according to configurable lifecycle and price changes trigger re-matching.
- Marketplace parties can transact directly without being forced into Escrow.
- A user can create standalone Escrow for a deal originating anywhere.
- Marketplace handoff creates only a draft until parties accept final terms.
- Escrow fee policy is configurable and buyer/seller/shared allocation is supported.
- Payments cannot become authoritative without provider verification and idempotency.
- Ledger entries balance and corrections are compensating/reversing, not silent edits.
- Rewards are calculated accurately after eligible completion while internal rates remain confidential.
- Company Referral is applied when no valid external referral exists.
- Reward Wallet and withdrawal rules are enforced.
- Buyer and seller receive TrustMart service-review requests after eligible completed Escrow.
- Low ratings create controlled service-recovery follow-up.
- AI and n8n cannot control money or expose confidential policy.
- Admin actions respect domain guards, RBAC, maker-checker and audit.
- Public website/Web App consistently use the approved TrustMart identity: Marketplace | Escrow; Find. Secure. Transact.; navy/gold/white brand system.
- Critical security, privacy, financial, legal/provider and operational launch gates pass before production.

MASTER PRODUCT PRINCIPLE

Marketplace creates opportunities. Escrow secures eligible deals from TrustMart or elsewhere. Marketplace Escrow is optional. Financial truth stays in the backend ledger. AI assists. n8n orchestrates. Humans remain accountable for high-risk financial, legal, fraud and dispute decisions.

Appendix A - Claude Code Quick Reference

Topic	Rule
Brand	TrustMart Limited Marketplace Escrow Find. Secure. Transact.
Marketplace Escrow	Optional.
Standalone Escrow	Required core capability.
Match threshold	70% initial default; configurable.
Listing duration	14 days initial default; configurable.
Seller pricing	¥5,000 weekly / ¥15,000 monthly initial defaults; configurable.
Escrow fee	2.5% current default; configurable.
Fee payer	Buyer / Seller / agreed shared allocation.
Referral	0.3% internal confidential.
Buyer appreciation	0.1% internal confidential.
Seller appreciation	0.1% internal confidential.
No external referral	Company Referral.
Reward withdrawal minimum	¥1,000.
Reviews	Buyer + seller after eligible completed Escrow.
Money authority	Backend payment verification + ledger.
AI/n8n	Assist/orchestrate only; no financial authority.
Stack	TypeScript, Next.js, NestJS, PostgreSQL, Prisma, REST/OpenAPI, pnpm/Turborepo, Docker, n8n.
Delivery	Web/PWA first; Android after traction; iOS later.

Appendix B - Change Summary in v5.0

- Consolidates the latest TrustMart Marketplace and standalone Escrow conclusions into one document.
- Updates the official short tagline to Find. Secure. Transact.
- Updates product descriptor to Marketplace | Escrow and retires escrow-only brand wording.
- Preserves the approved navy/gold/white logo system and TM shield/handshake identity.
- Confirms Marketplace Escrow is optional and standalone Escrow is a sibling core product.
- Confirms seller subscription + buyer consent/contact preference as the contact-access model.
- Adds/locks the Customer Experience & Service Review Engine.
- Locks confidential referral/appreciation-rate handling and Company Referral default.
- Strengthens Claude Code direct-build workflow, stop conditions, test gates and implementation sequence.
